

Agricultural Antipollution Measure

Nowadays farmers over used pesticides and chemical fertilizer in the agricultural sector, it could causes both of producer and consumer' s health harm, destroy ecosystem and natural environment.

There are :

- ①An effectiveness-driven forming method was widely promoted because after war respond to food demand and in order to input huge amount of pesticides and chemical fertilizer.
- ②According of value and rules in agricultural marketing, if the crop is not qualified an outstanding size and it should not be produced because the crop will not have a commercial value.

Above all of affects were happened in the past of years: However, in recently year the pattern of agricultural has been changed.

- ①Major distributors, restaurant industries and organization of membership system organic crop distribution direct trading outside market activity is increasing.
- ②Corresponding to the Safety and Without Worried all demanded for consumers need.
- ③According to the Agricultural industries, cross industries have began and participated in a competition at market place.

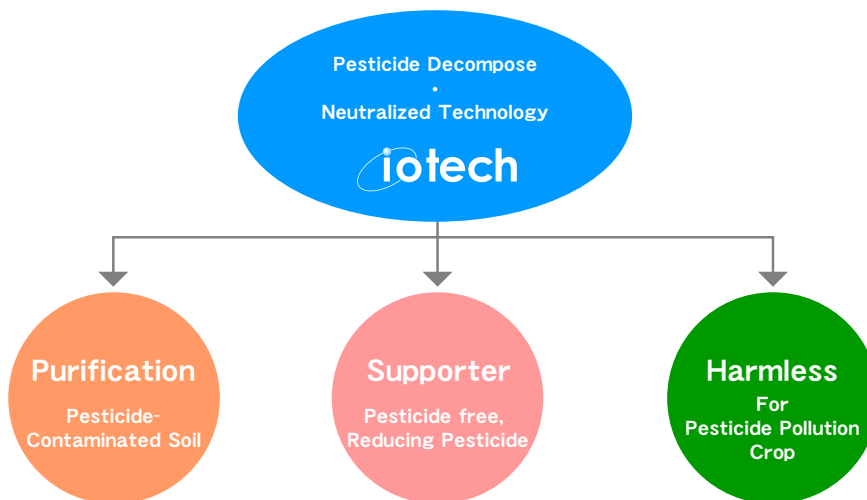

Those circumstances such as above of listing at the movement have begun causing a big change significantly.

For realization of seeking market "Food safety and Without Worried" :

- ①Ensure the safety of soil.
- ②Ensure the safety for production.
- ③Ensure the safety for distribution.

It is necessary to establish an efficient simple technique under low cost.

The concept of ionized technology in agriculture field to which supports "Without Worry and Safety"
